Sage 100 Contractor Data Disaster Recovery - Are You Prepared?

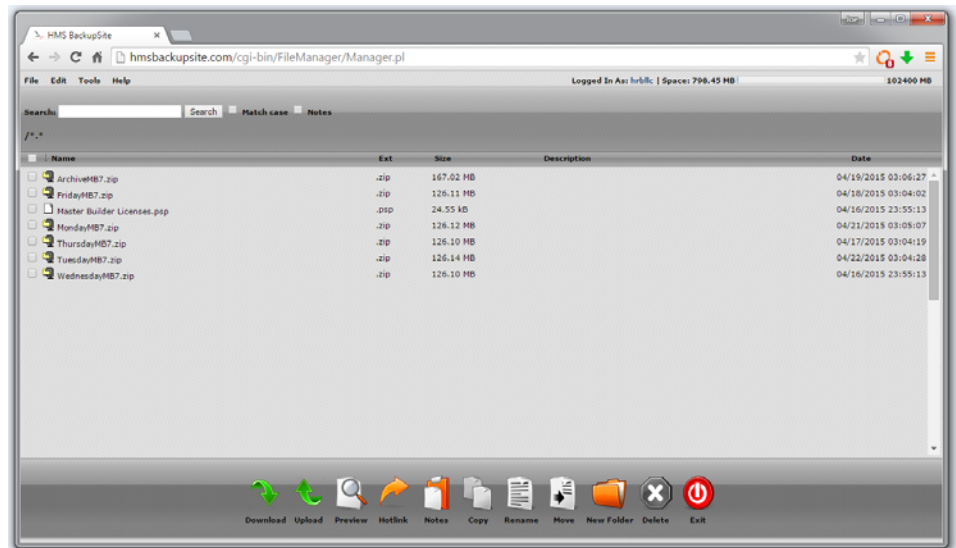

Nearly one in four computer users have lost content to viruses, blackouts, spyware, hackers, electrical or equipment failure, yet only 31% of business computer users back up their data more than once a month.

Although catastrophic events are what people fear most when they think about disaster recovery, the leading causes of Sage 100 Contractor data loss are hardware failure, human error and only using incremental backups.

Even if you regularly back up your company data files, you may not store them in a secure offsite location. By failing to do so, you protect your company from only a portion of the woes that can result in damaged, unrecoverable files.

With the newly released HMS BackupSite 4.0 you will be able to store all of your Sage 100 Contractor company data files offsite in a secure location you can access from anywhere!

With our innovative Automatic Daily Backup option you can rest easily knowing that every day your Sage 100 Contractor company data files are automatically zipped and uploaded to your Backup Site.

* This backup service is exclusively for Sage 100 Contractor Data Files.
